

200 East 79th Street Lobby

NEW YORK, NY

200 East 79th Street was constructed in 2014. Its design integrates classic and traditional elements with a modern sensibility, reimagining the heritage of Upper East Side architecture. EverGreene worked closely with the architect to produce plaster elements that would seamlessly integrate and align with their vision for the luxury hotel lobby. We designed, sculpted, cast, and installed sixteen plaster bas-relief panels frieze.
