

Carnegie Library Façade Restoration

WASHINGTON, DC

Constructed in the Beaux-Arts style on Mount Vernon Square, the Carnegie library was constructed in 1899-1902 through funds provided by venture capitalist and philanthropist Andrew Carnegie. Designed by Albert Randolph Ross of Ackerman & Ross, the building design reflects turn-of the century library planning. Originally the Central Public Library for Washington D.C., the building most recently served as event space for Events DC and a research library and exhibition space for the Historical Society of Washington, D.C. Despite its status as a historically designated building, it has remained functionally vacant for the last 45 years.

The building recently underwent a major restoration campaign. The new tenant, Apple Inc., has assumed responsibility as the new stewards of the building's interior as well as exterior. Apple made curatorial choices on selecting areas (i.e. modillions, dentils, and pediments) of the building to preserve, conserve, and/ or restore. EverGreene performed a conditions assessment of the exterior stone from the ground and from a lift. Treatments were recommended for the restoration of the exterior stone based on this assessment. The tenant was committed to conserving the historic exterior building materials....
