

New Museum Of Contemporary Art

NEW YORK, NY

For the newly constructed New Museum of Contemporary Art, EverGreene was commissioned to paint over 100,000 square-feet of gallery and public spaces. A fast pace was required to meet the production schedule. Scaffolding and lift systems were bought in to paint the 16 foot-high walls in the gallery spaces. Intumescent paint was applied on exposed steel beams and columns, and the lobby ceiling was repainted after installation to match the existing wall color.
