

Private Club Main Dining Room Ceiling

NEW YORK, NY

Originally designed in 1899 by architects McKim, Mead, & White, the private club has been designated as both a New York City Landmark and a National Historic Landmark. The palazzo-inspired building sits prominently on a Fifth Avenue corner, within a distinguished and historic neighborhood filled with attention-provoking monuments and landmarks.

The project began with the Club's desire to improve the lighting conditions in the Main Dining Room in order to improve the user-experience and enhance the significant architectural features, the most prominent of which are the 38' polychromed historic ceilings and wood paneled walls and columns. At the same time, the Club wanted to bring the ceiling to a sound condition and well-maintained appearance. Functionally, in addition to serving members three daily meals, the space is also used as an event space for programs ranging from lectures to weddings. The Club had found their existing lighting and control systems were inadequate for their purposes.

The Private Club Main Dining Room Ceiling project was a thoughtfully planned and executed process representing the collaborative efforts of the Club, Zubatkin (Owner's Representative), EverGreene Architectural Arts (Conservation, Plaster, and Murals), Kugler Ning Lighting, Constructomics (General Contractor), and ICOR Consulting Engineers (MEP). The project goals were to restore the ceiling with great respect for the original design and materials, enhance the dining room with appropriate architectural lighting for its function and historic character, and fulfill its aesthetic potential..
