

Verizon Barclay-Vesey Building

NEW YORK, NY

The Verizon Barclay-Vesey Building (Ralph Walker of McKenzie, Voorhees and Gmelin, 1923-1927) is an important early Art Deco skyscraper in New York. It is also known as 100 Barclay and the New York Telephone Company Building. The lobby's twelve ceiling murals on the history of communications are embellished with gilded pastiglia relief ornament and surrounded by decoratively painted foliate borders, ornamental plaster foliate borders, and gilded light covers. The lobby wall and floors are clad in polished travertine accented with deep red and green Levanto marble. Extensive ornamental metalwork includes bronze and hammered iron at doorways, elevators and grills.

EverGreene was contracted to conduct a pilot study for the conservation of the murals and restore all decorative elements of this magnificent space following the 1993 World Trade Center bombing, and then again with the catastrophic damage suffered during the collapse of the World Trade Center on September 11, 2001 and a third time after the effects of Hurricane Sandy in 2012.
